

SUHAS DHAMAPURKAR

Data Analyst | SQL · Python · Power BI

+91 8767306302 | suhasdhamapurkar1710@gmail.com | Pune, MH | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in SQL, Python, and Excel — building ETL pipelines, cleaning and validating data, and creating Power BI dashboards and reports that replace manual workflows. Combines statistical analysis and machine learning with strong critical thinking and problem-solving to turn raw data into decision-ready insights for business stakeholders. Independently designed, built, and deployed Resilytics, a production B2B analytics platform — covering the full path from raw data to a live decision-support product. Ranked 8th (Top 5%) of 150+ participants, Imarticus Data Science Hackathon (Apr 2026).

PROFESSIONAL EXPERIENCE

Data Analyst Intern — Labmentix Pvt. Ltd. (Remote)

Feb 2025 – May 2025

- Engineered automated ETL pipelines using Python and SQL, reducing weekly data processing time by 35%.
- Built and productionized an XGBoost churn prediction machine learning model on 7,000+ telecom customer records, achieving 85% test accuracy; surfaced top 3 churn drivers adopted by the retention team.
- Designed Power BI dashboards and reports with DAX measures tracking revenue KPIs and profitability trends, replacing 4 recurring manual Excel reports and saving ~6 hours of analyst time per week.
- Collaborated cross-functionally with the team to align KPI definitions and validate data assumptions, applying critical thinking to ensure dashboard accuracy for business decision-making.

Data Analyst (Independent Project) — Resilytics (resilytics.in)

Aug 2025 – Present

- Designed and built a multi-tenant decision-intelligence SaaS platform solo: structured data ingestion, schema validation, canonical transformation, analytics warehouse, risk/simulation engine, and executive reporting, with tenant isolation enforced at the SQL layer.
- Implemented a Monte Carlo simulation and shock-testing engine alongside a SQL/Python analytics layer applying HHI (market concentration), Basel III VaR-95, and modified Altman Z-Score, turning raw SMB transaction data into board-ready risk and decision reports.
- Owned full-stack architecture and production deployment (FastAPI, PostgreSQL, Redis, async RQ workers, DuckDB warehouse; React/TypeScript/Vite frontend), including database migrations, automated release checks, and demo-environment tooling — sole engineer end-to-end.

PROJECTS

E-Commerce Business Analytics — Imarticus PG Capstone Project | [GitHub](#)

2025–2026

- Analyzed 100,000+ orders across 9 relational tables using advanced SQL (CTEs, window functions RANK/LAG/NTILE, stored procedures, multi-table joins).
- Delivered RFM customer segmentation (Champions to Lost), Pareto revenue analysis (top 5 categories = 62% of revenue), and a cohort retention table; built a Power BI drill-through dashboard and report exposing delivery-delay root causes through data visualization.

Retail Sales Intelligence Dashboard — Power BI | [GitHub](#)

2025–2026

- Built a 4-page interactive Power BI dashboard (Returns & Delivery, Sales & Profit, Target Achievement, Key Risk & Action Plan) analyzing Rs. 29.4L in sales across 2015–2018, using KPI cards, YoY growth DAX measures, dynamic slicers, and a decomposition tree for root-cause drill-down.
- Surfaced actionable business risks — Central region drove 60% of total sales (concentration risk), Standard Class shipping averaged 5-day delays across 60% of orders, and return rate rose from 5.4% to 6.9% — and converted findings into a category-level action plan, tracking 88.48% achievement against a Rs. 5.4L sales target.

Yes Bank Stock Price Analysis & Forecasting — Time Series / ML | [GitHub](#)

2025–2026

- Analyzed 15 years of Yes Bank monthly stock data (2005–2020) using statistical analysis to study price volatility around the 2018 fraud case; built and compared Random Forest, ARIMA, and SARIMA machine learning models for closing-price forecasting.
- SARIMA model (best performer) forecast next month's closing price at Rs. 15.80; Random Forest regression on intra-month price data achieved $R^2 = 0.97$ (MAE Rs. 14.96, RMSE Rs. 23.57).
- Quantified a ~96% price decline from the pre-2018 peak (Rs. 367.90) through data visualization and trend analysis, informing risk-based investment recommendations.

TECHNICAL SKILLS

Data Analysis & Visualization: SQL, Python (Pandas, NumPy), Excel, Power BI (DAX, Star Schema, Drill-Through, RLS), Tableau, Matplotlib, Seaborn, Dashboards & Reporting

Statistics & Machine Learning: Statistical Analysis, Hypothesis Testing, A/B Testing, Cohort Analysis, Regression, Classification, Clustering, Time-Series Forecasting (ARIMA/SARIMA), XGBoost, Scikit-learn, TensorFlow

Data Engineering: ETL Pipelines, Data Cleaning, Data Validation, Data Transformation, Star Schema Design

Cloud & Tools: AWS Cloud Fundamentals (hands-on deployment; Cloud Practitioner cert in progress), Git, GitHub, Jupyter Notebook, VS Code, FastAPI, Railway, Vercel

Core Competencies: Critical Thinking & Problem Solving, Data Storytelling, Cross-Functional Collaboration, Business Communication, Attention to Detail

EDUCATION

Post Graduate Program in Data Science & Analytics — Imarticus Learning

Aug 2025 – May 2026

B.Tech (AI & ML) — KIT's College of Engineering, Kolhapur (CGPA: 7.45/10)

2021 – 2025

ACHIEVEMENTS & CERTIFICATIONS

- 8th Rank (Top 5%) — Imarticus Data Science Hackathon, Apr 2026 (150+ participants nationwide).
- Data Analysis with Python — Forage.
